Description

AC series - Encapsulated 60W converter is a 60W Isolated, regulated ac/dc encapsulated power module with 120W peak load lasting 10 seconds and long hold-up time setting by external capacitors. It features a high efficiency up to 90%, wide working ambient temperature range -40~+80°C, no minimum load required, 4kVac reinforced insulation, OVP, SCP, etc. These power modules use advanced power processing, control and packaging technologies and are suitable for all kinds of systems, such as household appliances, medical devices, industrial control communication systems and network equipment, etc.

Trimming Output Voltage – for Single output models

Only the single output converters have a trim function. That allows users to adjust the output voltage from +10% to -10%, please refer to the trim table that follow for details. Adjustments to the output voltage can be used with a simple fixed resistor as shown in Figures 1 and 2. A single fixed resistor can increase or decrease the output voltage depending on its connection.

Note:

- X Trim adjustments higher than the specified range can have an adverse effect on the converter's performance and are not recommended.
- % If the trim function is not used, leave the trim pin open.

Output Ripple Noise

The two copper strips simulate real-world PCB impedances between the converter and its load. Scope measurements should be made using BNC connectors or The probe ground should be less than 1/2 inch and soldered directly to the fixture.

All external capacitors should have appropriate voltage ratings and be located as close to the converter as possible.

Temperature variations for all relevant parameters should be taken into consideration. The most effective combination of external I/O capacitors will be a function of line voltage and source impedance, as well as particular load and layout conditions. See Figure 3.
